

NEW!

DAT™ Next Generation

Harness the power of computer adaptive tests to assess the abilities that predict success.

Differential Aptitude Tests™ or DAT™ is a suite of assessments measuring cognitive abilities in a number of areas. This latest edition, DAT™ Next Generation, combines cutting-edge Computerized Adaptive Testing (CAT) to offer five new DAT tests in a number of languages.

Compared with traditional fixed form tests, CAT presents a modern method of delivering item-banked tests to job applicants or students—with *many enhancements from the previous version.*

Highly predictive of performance

Initially launched in 1947 to support career guidance and vocational counseling in students, DAT's use has extended to measure an individual's level of general and specific mental abilities that are required for success in many job roles and training courses. The increased usage of ability tests in these areas is supported by in-depth research showing that tests of mental ability are highly predictive of performance.
